Cast stone and Silkstone care guide

Last updated 14.09.2026

Baths, basins and shower trays. Two materials, two care routines.

Cast stone

- Clean with a soft cloth and a liquid bathroom cleaner (for example Cillit or Ajax). Rinse and wipe dry.
- **Do not use abrasive, strongly acidic or strongly alkaline products:** they scratch or etch the surface.
- Avoid long contact with strong dyes, such as hair dye, and with products containing acetone.

Silkstone

- For everyday cleaning, a damp Scotch-Brite-type sponge and an ordinary mild detergent. Rinse.
- **Avoid strong acids and solvents**, for example products containing chloromethane or acetone.
- An ingrained stain: bleach, left on the surface for **five minutes at most**. Then wash with an ordinary cleaner and rinse with water.
- Sharp objects can scratch the surface. Small marks are polished out; deeper damage is repaired by a professional.
